LETTER OF SUBMITTAL

THE COMMONWEALTH OF MASSACHUSETTS,
OFFICE OF THE SECRETARY,
DIVISION OF VITAL STATISTICS, BOSTON, March 31, 1934.

To the Honorable Senate and House of Representatives:

I have the honor to submit herewith, as required by Chapter 46, section 21, and Chapter 208, section 47, of the General Laws, the ninety-second annual report on statistics of births, marriages, divorces, and deaths in Massachusetts, for the calendar year 1933 in two parts: Part I, Mortality Statistics; Part II, Statistics of Births, Marriages, and Divorces. The fact that deaths are reported monthly, while births, marriages, and statistics of divorce are not reportable until March, April and May of the year following that in which the events occur, makes possible the availability of the mortality report earlier than the report of births, marriages, and divorces. Hence the presentation in two parts in one volume.

The editorial review and the method of presentation of the statistical data were prepared by Arthur J. Hassett, State Registrar, in charge of the Division of Vital Statistics. The statistical tables were prepared under the direction of Elizabeth M. Canty, principal statistical clerk of the division. The exhibition of tabular results is restricted to such as are plainly of practical utility within the meaning of the statute by authority of which the tables are prepared.

Respectfully submitted,

FREDERIC W. COOK,
Secretary of the Commonwealth.

INTRODUCTION.

History.

Death Registration.—Massachusetts was the first colony to recognize the importance of the registration of vital statistics and Chapter 3, Acts of 1639 of the Laws of the Colony and Province of Massachusetts Bay required the registration of births, marriages and deaths, and in 1840 it was required by statute that copies should be filed with the Secretary of the Commonwealth. In 1880 the registration area for deaths recognized by the United States Bureau of the Census, i.e., the States, and cities in other States, effectively enforcing satisfactory registration laws of all deaths registered, included but two States, Massachusetts and New Jersey, the District of Columbia, and a number of cities in non-registration States.

During the period 1841 to 1933, inclusive, 3,497,336 deaths have been reported, recorded, and tabulated in the Division of Vital Statistics.

These records are not only on file in the cities and towns in which they occurred, and in the city and town given as the residence of the deceased at the time of death, but also at the State House.

Purpose.—Death registration often gives the first intimation of pestilential disease, permitting health officers to attack epidemics in their incipency. It serves as evidence in the inheritance of property and in the settlement of life insurance. It is useful in preventing crime through the restriction placed upon the disposal of dead human bodies, and insures a permanent and uniform record of the death of each individual for both sentimental and legal reasons.

Mortality Statistics. — Mortality statistics, or statistics of deaths, are useful in showing the extent and rate of change in population produced by deaths, the average duration of life, the relative frequency with which the several causes produce death, and for their service in creating an interest in public health administration and securing support for sanitary measures. In comparison with birth statistics they give useful information regarding population increase or decrease. Mortality statistics, however, cannot be used as an index of the prevalence of certain diseases, because there is no fixed ratio between sickness and fatality. Only cases of fatal sickness or disease are given, while morbidity statistics include all cases, whether fatal or not.

Source of Data. — Mortality statistics are based upon original data obtained by the registration of deaths, which is accomplished by the filing of a blank or schedule known as the standard death certificate.

The responsibility for seeing that a certificate is properly made out and filed with the local board of health rests primarily with the undertaker, who is required by law to present a satisfactory certificate of death before he may obtain a permit to remove the body from the city or town in which the death occurred, or to bury the body. The local board of health is required to transmit the death certificate to the city or town clerk, who in turn records the death and is required to transmit a certified copy to the Secretary of the Commonwealth on or before the tenth day of the month following that in which the death occurred. Hospitals and other institutions are required to obtain, when a person is received, the facts which would be required for record in the event of the death of such person.

Death Rates and Their Comparability. — The death rates given in this report are based upon the comparison of total deaths with the aggregate population. They are usually expressed in terms of the number of deaths per 1,000 population, and are calculated by dividing the total number of deaths by the population in thousands. This means that death rates vary with the character of the population and each element has its relation to the rate of mortality, and therefore, for comparison with other States or countries, the make-up of the population must be considered. The death rate per 1,000 males is generally higher than the rate per 1,000 females. Hence, a State having a relatively larger female population than another will normally show a lower death rate, and a community where the very young or old predominate will show a higher rate than a community made up largely of young adults. Rates will also vary with the color and nationality of the inhabitants.

Factors which seriously affect the comparability of the death rates of different communities are: (1) race composition; (2) the social, marital, and economic status of the people; (3) employment; (4) the location of hospitals and institutions; (5) migration; and (6) the birth rate.

The rates given in this report, as well as those in all the preceding registration reports, are based on the inclusion of all deaths, both resident and nonresident, occurring in each city or town. Deaths in the asylums for the insane and in other State institutions are enumerated with those of the town where they are located, and while for certain localities nonresident deaths are given (see footnote, page 18), no plan has yet been devised for charging nonresidents back to the towns from which they come. The popularity of city hospitals also affects local statistics. Many victims of diseases, contracted in the country, are carried to the city hospitals and some die there. This requires their deaths to be recorded in the city where they die. Obviously, this is an injustice which is especially apparent in some instances.

In addition to the erroneous and unwarranted conclusions sometimes arrived at by attempting to compare data which are not comparable, such as death rates of different communities of varying sex and age composition, another possible source of error in mortality statistics is the original data, which are sometimes given by persons not fully cognizant of the true facts.

Number of Deaths and Death Rates. — There was an increase in the mortality of 1933 as compared with that of 1932, the number of deaths occurring during the calendar year 1933 being 50,832, an increase as compared with 1932, of 1,301. Based on the estimated population of 1933 of 4,318,137, these deaths correspond to a rate of 11.8 per 1,000 population. The rate for 1932 was 11.5.

During the ten-year periods, from 1912 to 1921, inclusive, the average death rate of the Commonwealth was 14.8, and 1922 to 1931, inclusive, 12.3.

This remarkable decrease in mortality has been the rule rather than the exception in the experiences of the other States. Since 1900 the average death rate for Massachusetts has been 14.6 per 1,000 living. During the period 1896 to 1900 this rate stood at 18.1, while the decade from 1924-1933 shows an average rate of 12.2, a decided decrease.

Table 4, on page 32, shows the number of deaths and the death rates per 1,000 population for the census years and per 1,000 estimated population for the intercensal years from 1909 to 1933.

Sex. — Of the 50,832 deaths in 1933, 26,131, or 51.4 per cent, were males, the percentage in 1932 being 51. The proportion of males in the living population, as shown by the United States Census of 1930, was 48.7 per cent. Expressed as a ratio there were 1,058 deaths of males per 1,000 deaths of females in 1933, as compared with 1,046 in 1932, 1,055 in 1931 and 1,041 in 1930.

Table 5, on page 32, shows that the death rate for males has been consistently greater than the death rate for females. The death rate of the sexes has fluctuated considerably, reaching the maximum in 1918, when the difference was 3 per 1,000.

Age. — Of the 50,832 deaths in 1933, 3,294 or 6.5 per cent, were of infants under 1 year of age, as compared with 7.3 per cent in 1932, and an average of 8.6 for the five years from 1928 to 1932, 12.1 for the five years from 1923 to 1927, and 14.5 for the five years from 1918 to 1922. A more detailed discussion of infant mortality may be found on pages 4 and 5.

Sex and Age. — The death rate of adult males might be expected to exceed the rate of adult females, on account of the more dangerous occupations of the males, but the excess in the death rate of male infants as compared with female infants has never been satisfactorily explained. Of the 3,294 decedents under 1 year of age in 1933, 1,894 or 57.5 per cent, were males. The ratio of male to female deaths among the higher age periods fluctuated somewhat. The proportion of male deaths was the larger from 1 year of age up to and including the age period 70 to 74 years, with the exception of the 20 to 29 and 30 to 34-year age periods, in which the number of female deaths was larger than the number of male deaths. From the age of 75 years and upward the number of deaths of females exceeded the deaths of males. The ratios of male deaths per 1,000 deaths of females at the various age periods in the four years 1930-1933 are shown in Table 8, on page 33.

The excess of females in the population 65 years of age and over is so great that even though their mortality at each age period is below that of males, the absolute number of deaths is greater. Among the 26,131 male decedents in 1933, 1,894 or 7.2 per cent, were under 1 year of age; among the 24,701 female decedents, 1,400 or 5.7 per cent, were under 1 year; and among the decedents of both sexes 6.5 per cent were under 1 year (see table 9, page 34).

Marital Condition. — Not quite one half (48.3 per cent) of the decedents 15 years of age and over, whose marital condition was reported in 1933 were married, 18.4 per cent were single, 31.8 per cent were widowed, 1.3 per cent were divorced, and .2 per cent were unknown. Among the male decedents 57.3 per cent were married, 18.6 per cent were single, 22.2 per cent were widowed, 1.5 per cent were divorced, and .4 per cent were unknown. Among the female decedents 39.1 per cent were married, 18.1 per cent were single, 41.7 per cent were widowed, 1.1 per cent were divorced, and less than one tenth of 1 per cent were unknown. No precise study of the bearing of marital condition on mortality statistics can be made, however, without a detailed statement of the age distribution of the population. The age groups used in the census statistics do not coincide with the age groups used in the tabulation of death statistics, so that the two sets of figures cannot be used together. Table 12, on page 36, shows the number of deaths of males and females 15 years of age and over, by marital condition.

Centenarians. — Among the deaths registered during 1933, there were 19 of reputed centenarians, 14 of whom were females, 11 were native, and 8 were foreign born, 16 were widowed, and 3 were single. Table 11, on page 35, presents data concerning the deaths of centenarians by sex, nativity, marital condition, and maximum age at death for the twenty-five years 1909 to 1933.

Nativity. — Nearly two thirds (60.8 per cent) of the decedents whose nativity

was reported on the death certificates in 1933 were native, and 38.9 per cent were foreign. There were three-tenths of one per cent whose nativity was not reported.

Seasonal Distribution of Deaths. — The largest number of deaths during any month occurred in January (5,810), and the next largest number in December (4,827). Since the months are not of equal length, the monthly incidence must be reduced to a uniform basis. The average daily number of deaths for 1933 was 139. The months showing the highest average for the year were January (187), December (156), February (155) and March (150). Table 13, on page 37, shows the number of deaths in each month of 1933, in the State, in counties, and in cities having over 50,000 inhabitants in 1930.

Infant Mortality.

The infant mortality for the State in 1933 was 51.9 per 1,000 live births. This rate is the lowest ever recorded in the Commonwealth. Reference to Table 22, on page 113, shows in striking manner the remarkable reduction in infant mortality, actual decrements without regard for increase in the number of births and without regard for increase in population.

The greatest infant mortality occurred in 1896 (11,765 deaths); and the next greatest actual number of infant deaths occurred twelve years later, 1908 (11,606).

The figures from 1919 to 1933 are shown in the following table:

| YEARS. | Number of deaths under one year of age. | Infant mortality rates. |
|----------------|---|-------------------------------|
| 1919 | 7,769 | 88.5 |
| 1920 | 8,382 | 91.2 |
| 1921 | 7,005 | 75.9 |
| 1922 | 7,129 | 81.3 |
| 1923 | 6,968 | 78.1 |
| 1924 | 6,191 | 67.7 |
| 1925 | 6,294 | 73.1 |
| 1926 | 6,130 | 73.4 |
| 1927 | 5,320 | 64.7 |
| 1928 | 5,118 | 64.7 |
| 1929 | 4,592 | 62.0 |
| 1930 | 4,440 | 60.3 |
| 1931 | 3,803 | 54.8 |
| 1932 | 3,635 | 53.1 |
| 1933 | 3,294 | 51.9 |

In the ten years from 1924 to 1933, there has been a decrease of 30.6 per cent in the number of live births registered, and in the actual number of deaths under one year of 46.8 per cent. In 1933, deaths in Boston under 1 year of age numbered 958, or 58.9 per 1,000 live births, as compared with 59.3 in 1932, 60.6 in 1931, 69.6 in 1930, and 68.9 in 1929. In the ten years from 1924 to 1933 there has been a decrease of 3,527 in the number of live births registered and a decrease in the actual number of deaths under 1 year of 510, or 34.7 per cent. For the remainder of the State, the number of births registered decreased 34.1 per cent during this period, while the number of deaths under 1 year decreased 50.5 per cent. The infant mortality rates for the State, exclusive of Boston, decreased from 97.1 per 1,000 live births in 1917 to 50.5 in 1933, as compared with a decrease in Boston from 98.5 in 1917 to 58.9 in 1933. (See Table 25 on page 115.)

Deaths under one month and also under one year of age in each municipality are shown in Table 21 on pages 111 to 113.

The infant mortality rates in municipalities having 15,000 or more inhabitants in 1930 are shown for the years 1926 to 1933 in Table 23 on page 114.

A careful analysis of the returns of cities and towns in which children's hospitals are located would probably show lower infant mortality rates than appear in Table 23.

The highest proportion of deaths occurs in the early period of infancy and especially is this true of the first few days. In 1933, 1,732 deaths occurred in the first week, constituting 52.6 per cent of all deaths under 1 year of age. On the first day the percentage of deaths (30.5) was higher than on any other day. In the first month of life there were 2,089 deaths, or 63.4 per cent of all infant deaths.

In the first three months there were 2,485 deaths, or 75.4 per cent of all infant deaths. Over three-fourths (86.6 per cent) of the infant deaths occurred in the first half of the year.

Over three-fourths (80.8 per cent) of the 1,732 babies who died less than one week after birth died of prematurity, congenital debility, malformations, or injuries received at birth. Of the 1,813 babies who died from these causes before reaching the age of 1 year 47.2 per cent died in less than one day, 77.2 per cent died in less than one week, and 88.4 per cent died in less than one month. The second most important cause of infant deaths — gastric and intestinal diseases — claimed 144, or 4.4 per cent of the babies who died before reaching 1 year of age. Fourteen and six-tenths per cent of the babies who died from this cause died in less than one month after birth, 15.3 per cent within one but less than two months after birth, and 8.3 per cent within two but less than three months after birth.

The largest number of deaths of infants is due to developmental and wasting diseases*, and the figures indicate a reduction in infant mortality due to these causes, — from 29.0 deaths per 1,000 live births in 1926 to 24.1 in 1933. Respiratory diseases also caused a considerable number of deaths. The number of infant deaths from bronchopneumonia has decreased somewhat since 1929 when there were 674 infant deaths from this cause, 633 in 1930, 493 in 1931, 536 in 1932, and 477 in 1933. The principal causes of infant deaths for the years 1926 to 1933 are shown in Table 27, page 116.

Causes of Death.¹

Sources of Error in Mortality Statistics.— The chief element of error in mortality statistics lies in the inaccuracy of the statement of the cause of death as reported by the attending physician, who may not have been in a position to feel reasonably certain as to the nature of the terminal illness. Statements of cause of death are often incomplete as a result of the unintentional failure of the physician to state all the morbid conditions known to him which resulted in the death. It is also probable that there are many unavoidable errors of mistaken diagnosis.

It should also be borne in mind that the process of classifying the thousands of different terms — some of them of a very indefinite or unsatisfactory character — under the 214 titles of the International List of Causes of Death presents many difficulties which are seldom fully appreciated by those who have not engaged in the work of classification. Even if each certificate of death out of the 50,832 received during 1933 bore only a single cause, the process would present many difficulties. Many certificates, however, bear statement of two or more causes instead of one and a system of selection, according to the precedents and rules of the International Committee, has been adopted by the United States Bureau of the Census, and is used in the Division of Vital Statistics. Because of the complications attendant upon any attempt to show all primary and secondary terms in relation, it becomes necessary to base all statistical compilations of causes of death on the selection of a preferred term. Special weight has usually been given to communicable diseases when combined with other causes, and assignments are made to external causes when serious enough to be a factor in the cause of death.

Principal Causes of Death. — More than one-half of the 50,832 deaths reported in 1933 were caused by diseases of the heart, cancer, cerebral hemorrhage (including embolism and thrombosis) pneumonia and nephritis. These diseases, together with tuberculosis in all forms, external causes, malformations and the diseases of early infancy caused 79.3 per cent of the deaths for the year.

Heart Disease* was the leading cause of death in 1933, the total number being 14,119 corresponding to a rate of 327.0 per 100,000 population as compared with 13,255 deaths or 308.5 per 100,000 in 1932. The great increase in the last few years was partly due to the fact that under the revised classification of causes of death diseases of the coronary artery, which were formerly classified as arterial diseases, are now classified under diseases of the heart.

Cancer and other Malignant Tumors are still increasing and caused 6,382 deaths in 1933, corresponding to a death rate of 147.8 as compared with 143.2 in 1932. Of the deaths from cancer 51.4 per cent resulted from cancers of the digestive tract and peritoneum. The death rate from cancer has steadily risen from 89.9 in 1910, to 147.8 in 1933. It is possible that at least a part of this increase is due to

¹ In this report an asterisk (*) has been used in the text to denote those certified causes of death which the committee, after careful consideration, reported were acceptable statements of causes of death without autopsy.

more correct diagnosis and greater care on the part of the physicians in making reports, but a part at least is due to the lengthened span of life, resulting in a larger number of people reaching the older age groups.

Cerebral Hemorrhage, Cerebral Embolism and Thrombosis* were the causes of 4,359 deaths, or 100.9 per 100,000 population. The death rate from these diseases has fluctuated somewhat, being 94.8 in 1929, 96.7 in 1930, 102 in 1931, and 97 in 1932.

Pneumonia (including bronchopneumonia) caused 4,039 deaths in 1933, or 93.5 per 100,000 population. It was responsible for 3,803 deaths, or 88.5 per 100,000 population in 1932.

Bright's Disease* and Nephritis were the causes of 3,394 deaths in 1933, corresponding to a rate of 78.6 per 100,000 population, as compared with 83.2 in 1932, 78.9 in 1931, 85.1 in 1930, 79 in 1929, and an average rate of 83.1 for the five years from 1924 to 1928. There were 3,300 deaths caused by Bright's disease*, and 94 by acute nephritis.

Tuberculosis in its various forms claimed 2,281 victims in 1933, of whom 2,059 died from tuberculosis of the respiratory system*. Deaths due to the latter cause constituted 4.1 per cent of all deaths during the year, the rate being 47.7 per 100,000 population. In 1910 the death rate from tuberculosis of the respiratory system was 133.2. Since then the decline has been continuous from year to year with the exception of 1918 when the rate was 130. However, an increase of .2 per cent per 100,000 population has been noted in 1933.

Congenital Debility* and Malformations* caused 1,570 deaths in 1933, corresponding to a rate of 36.4 per 100,000 population. The death rates from these causes have shown a steady decline from 109.2 in 1910 (with the exception of 1912, 114.2).

Diabetes was the cause of 1,234 deaths in 1933, being responsible for a rate of 28.6 per 100,000 population. The rate from this disease has shown a steady increase for the last five years, being 27.8 in 1932, 24.8 in 1931, 24.0 in 1930, and 22.8 in 1929.

Maternal Mortality. Deaths from puerperal causes in the entire state in 1933 totalled 389, corresponding to a rate of 59.9 per 10,000 confinements. This rate was higher than the last two years, the rates being 52.6 for 1932 and 57 for 1931.

Puerperal septicemia was responsible for 103 deaths including 19 due to abortion with septic conditions, the rates for this cause in 1933 being 15.9 per 10,000 confinements; in 1932, 13.7, and in 1931, 16.5.

Influenza was responsible for 584 deaths, or 13.6 per 100,000 inhabitants, as compared with 27.1 in 1929, 6.3 in 1930, 10.1 in 1931, and 8.4 in 1932.

Diarrhea and Enteritis* caused 298 deaths in 1933, or 6.9 per 100,000 population. For the last ten years this rate has shown a marked decline. Fifty-four per cent of the total number of deaths charged to these causes in 1933 were of infants under 2 years of age. The rates from this cause for all ages have declined steadily, being 12.6 in 1929, 13.5 in 1930, 8.9 in 1931, and 7.7 in 1932.

Whooping Cough*, Measles*, and Scarlet Fever*, the principal epidemic maladies of childhood, were together responsible for 232 deaths of both adults and children, or 5.4 per 100,000 population in 1933, the rates for the three diseases separately being 2.2, .6 and 2.5 respectively. The mortality rates for all three of these diseases have changed greatly from year to year.

Alcoholism caused 225 deaths in 1933, an increase of 26 from those reported in 1932, and corresponding to a rate of 5.2 per 100,000 population.

Diphtheria and Croup*—which are classed together in the statistics, but practically all of which are of diphtheria—number 86, or 2.0 per 100,000 population in 1933. This rate was 2.5 in 1932, 2.3 in 1931, 4.3 in 1930 and 5.8 in 1929.

Typhoid Fever* has shown a steady decline since 1910, having dropped from 12.2 in that year to .6 in 1933. This decline is greater, relatively, than that shown for any other important cause of death. The total number of deaths due to typhoid fever in 1933 was 24, as compared with 25 in 1932, 31 in 1931, 38 in 1930, and 42 in 1929.

Death Rates from Violence during the past five years per 100,000 population were 81.8 in 1929, 82.3 in 1930, 83.8 in 1931, 81.1 in 1932, and 81.2 in 1933.

Deaths due to *Railroad Accidents and Injuries** total 81 in 1933, these include 13 deaths caused by a railroad and automobile collision and correspond to a rate

of 1.9 per 100,000 population. The rates for previous years were 1.4 in 1932 and 1.9 in 1931 and 1930.

Deaths resulting from *street-car accidents and injuries** numbered 17, including 2 deaths from automobile and street car collisions, or .4 per 100,000 population.

Automobile Accidents and Injuries* caused 801 deaths in 1933, or 18.5 per 100,000 population. This number is slightly higher than last year, when the rate was 18.2, as compared with 19.3 in 1931, and 18.8 in 1930. No accurate data are available for measuring the death rate per number of automobiles in use, as the statistics compiled by the Department of Public Works show the number of machines registered, and thus contain duplications, since one machine may be registered more than once in a calendar year.

It is probable, however, that the increase has not been so rapid as that of the number of machines in use.

The number of deaths from automobile accidents for the last ten years is shown in the following table:

DEATHS FROM AUTOMOBILE ACCIDENTS.

| <i>Years.</i> | <i>Deaths.</i> | <i>Years.</i> | <i>Deaths.</i> |
|----------------|----------------|----------------|----------------|
| 1924 | 705 | 1929 | 785 |
| 1925 | 743 | 1930 | 799 |
| 1926 | 682 | 1931 | 824 |
| 1927 | 697 | 1932 | 782 |
| 1928 | 734 | 1933 | 801 |

Effects of Heat. — In 1933 the deaths from this cause numbered 23. In 1932 there were 12 deaths; in 1931, 38; in 1930, 25; and in 1929, 37. The highest temperature recorded in 1933 was 99 degrees on June 29. The highest temperature recorded at the Weather Bureau of the United States Department of Agriculture since 1900 was 104 degrees on July 4, 1911. The highest temperature recorded in 1925 was 100 degrees on July 6.

The maximum mean temperature for the months of June, July and August was as follows:

| | June. | July. | August. |
|----------------|-------|-------|---------|
| 1933 | 79.5 | 79.1 | 79.5 |
| 1932 | 75.7 | 82.1 | 82.5 |
| 1931 | 75.4 | 81.3 | 79.6 |
| 1930 | 81.9 | 80.7 | 78.4 |
| 1929 | 77.7 | 82.2 | 78.5 |
| 1925 | 80.7 | 80.5 | 80.0 |
| 1911 | 73.2 | 86.0 | 76.3 |

The average monthly humidity was as follows:

| | June. | July. | August. |
|----------------|-------|-------|---------|
| 1933 | 61 | 67 | 70 |
| 1932 | 63 | 59 | 62 |
| 1931 | 64 | 69 | 69 |
| 1930 | 65 | 64 | 66 |
| 1929 | 61 | 59 | 64 |
| 1925 | 69 | 68 | 67 |
| 1911 | 75 | 65 | 78 |

Deaths caused by *machinery accidents** in 1933 numbered 35, or .8 per 100,000 population. The corresponding figures for previous years were 1.3 in 1929, 1.5 in 1930, 1.4 in 1931, and .6 in 1932.

The number of *suicides** reported in 1933 was 597 or 13.8 per 100,000 population. The rates since 1928 have been: 1929, 12.4; 1930, 12.9; 1931, 14.1; and 1932, 14.9.

Deaths caused by *firearms* numbered 187 in 1933, corresponding to a rate of 4.3 per 100,000 population. Of these deaths 113 were suicides, 44 were homicides, and 30 were accidental (including those concerning which the status as to suicide, homicide, or accident was in doubt).

Deaths from *homicide** numbered 110 in 1933, or 2.6 per 100,000 population. The rates for homicide in recent years are 1.6 in 1929, 1.9 in 1930, and 2.1 in 1931 and 1932.

The causes of death of males and females for each month and at seventeen age periods for the Commonwealth for the full International List of Causes of Death with certain subdivisions are shown in Table 14, on pages 38 to 75. The causes

denoted by letters, shown separately in indented type, Table 14, are a part of the total cause shown on the International List. In Table 15, on pages 76 to 100, the deaths are shown for 50 causes and groups of causes for each municipality.

For the Commonwealth as a whole the deaths and death rates for the seven years 1927 to 1933 are shown for the 38 causes and groups of causes in the Abridged International List in Table 17, on pages 102 and 103. The relation of this list to the Detailed International List is shown in the Appendix. In addition to the above presentations, certain other tables showing the causes of deaths are presented on pages 104 to 110.

Deaths Investigated by Medical Examiners.

Source of Data. — The statistics of deaths investigated by medical examiners published in this report are based upon annual returns made by medical examiners and associate medical examiners to the Secretary of the Commonwealth of abstracts of the records of deaths supposedly due to violence, the cause and manner of which have been investigated during the year. Deaths supposedly due to violence include not only deaths caused directly or indirectly by traumatism (including resulting septicemia), and by the action of chemical (drugs and poisons), thermal, or electrical agents, and deaths following abortion, but also deaths from disease resulting from injury or infection related to occupation, the sudden deaths of persons not disabled by recognized disease, and those of persons found dead.

Medical examiners are often called upon to view cases in which the death was not due to violence (heart disease, apoplexy, etc.), but where the death was simply sudden or where no physician had been in recent attendance. Medical examiners are also required to certify that they have viewed bodies to be cremated, and to make personal inquiry into the cause and manner of death.

Discrepancies will be found in comparing deaths based upon certificates returned to the city and town clerks and those contained in the reports of medical examiners. The causes when certified on the death certificates are more nearly accurate, because the reports received from the medical examiners after they themselves have certified in many instances to the cause shown do not contain all of the facts that led to death. Both the reports and certificates should compare and efforts are now being directed toward a uniformity in this regard.

Number of Deaths Investigated. — The number of deaths investigated by the medical examiners in 1933 was 8,587, or 16.9 per cent of the total number of deaths which occurred during the year, as compared with 8,377 deaths in 1932, or 16.2 per cent of the total number of deaths. About two-thirds (64.6 per cent) of these deaths were of males. Of the deaths investigated by medical examiners, 3,236 or 37.7 per cent, were reported as due to violence, while among the deaths returned to the registrars, 3,505 were reported as due to violence.

The largest number of cases investigated by medical examiners in 1933 was in Suffolk County, 1,933 as compared with 1,871 in 1932. Of the deaths investigated in Suffolk County, 751 or 38.9 per cent, were reported as due to violence (see Table 32, page 135).

Autopsies. — Autopsies were made in 688, or 8 per cent, of the cases investigated by the medical examiners in 1933, as compared with 7.2 per cent in 1932, 7.2 per cent in 1931, 6.9 per cent in 1930, and 7.2 per cent in 1929.

The highest proportion of autopsies was in Suffolk County where 17.1 per cent of the views were autopsied, there being 17.1 per cent in 1932 also. Table 34, on pages 142 and 143, shows the number of views and the number of autopsies in each county in each year from 1924 to 1933, and the number and per cent of views autopsied for the ten-year period, 1924 to 1933.

Cause of Death. — Over one-half (51.2 per cent) of the deaths viewed by medical examiners in 1933 were from causes not due to violence, 37.7 per cent were due to violence, and .7 per cent were stillbirths. Eight hundred and ninety-six, or 10.4 per cent of the views were for cremations.

Deaths from causes not due to violence numbered 4,397, of which 4,122 were from natural causes and 211 were due to alcoholism.

Deaths due to violence numbered 3,236, of which 2,525 were due to accident or negligence, 601 were suicides, and 110 were homicides.

Of the 2,525 deaths due to accident or negligence, 841 were due to falls, blows,

and falling bodies, 796 were due to automobile accidents, 257 resulted from drowning, 73 were due to railroad accidents including deaths caused by a railroad and automobile collision and 558 to other causes.

Suicides numbered 601, or 18.6 per cent, of the deaths due to violence. Suicides committed with firearms 113, and by the use of illuminating and other gases, 165, constituted about one-half (46.3 per cent) of the total number. The number of suicides by poisons was 62, by hanging or strangulation, 113, by drowning, 71, and other methods, 77. Slightly more than three-fourths (77.3 per cent) of the suicides were males.

Of the 601 persons committing suicide, 140 were 50 to 59 years of age, 136 were 40 to 49 years of age, 84 were 30 to 39 years of age, 56 were 20 to 29 years of age, 175 were over 60 years of age, and 10 were under 20 years of age. Among the male suicides the largest numbers were from 50 to 59 years of age, 116, and from 40 to 49 years, 111, while among the female suicides the largest number were from 30 to 39 and from 40 to 49 years of age, 25, and from 50 to 59 years, 24. The most common method of committing suicide was by illuminating or other gases.

Homicide numbered 110, of which 44 were by firearms, 10 were by cutting or piercing instruments, 54 by other means, and 2 were cases of infanticide. Of the 110 homicides, 70, or 63.6 per cent, were males.

The charts that follow were prepared by Mayo Tolman, Sanitary Engineer, from figures compiled by the Division of Vital Statistics.

STATISTICAL TABLES GENERAL MORTALITY

| Table 1 | DEATHS, ² BY SEX AND NATIVITY, AND DEATH RATES IN EACH COUNTY AND CITY: 1933. | | | | | | | | |

¹ Cities are printed in small capitals.

² Exclusive of stillbirths.

³ The rates shown in this column are based on the total population, and make no allowance for differences in the sex and age distribution of the population. The rates for certain localities are materially affected by deaths of nonresidents who may be attracted to those localities by their superior hospital facilities, or may resort to certain localities for treatment of tuberculosis, mental defects, or other diseases. The death rate, both including and excluding nonresidents, is shown.

⁴ 40 nonresidents.

⁷ 42 nonresidents.

⁹ 130 nonresidents.

⁵ 62 nonresidents.

⁸ 2,088 nonresidents.

¹⁰ 107 nonresidents.

⁶ 25 nonresidents.

¹¹ 317 nonresidents.

¹ Balance between.

² Deaths from heat for the year 1925 numbered 135. This is the nearest approach to the high mark since 1911 when the total number of deaths from this cause was 614.

The highest temperature recorded at the Weather Bureau of the United States Department of Agriculture since 1900 was 104 degrees on July 4, 1911. The highest temperature recorded in 1925 was 100 degrees on June 6.

The average monthly temperature for the months of June, July, and August, in 1911 and 1925, was as follows:

| | June. | July. | August. |
|------------|-------|-------|---------|
| 1911 . . . | 65.6 | 77.1 | 69.0 |
| 1925 . . . | 70.9 | 72.4 | 71.2 |

INTRODUCTION.

Birth Registration. — Like the registration of deaths, birth registration has been compulsory in Massachusetts since Colonial times. It was one of the first States to be included in the registration area of the United States Census Bureau. The making of authentic birth records presents greater difficulties than that of either marriages or deaths, and probably no State or sizable city claims 100 per cent birth registration; but the results in Massachusetts on the whole are considered to be far above the average and efforts are continually being made for its improvement.

Records are made in the first instance by the local registrars, who are the city and town clerks, with the exception of Boston where the City Registrar is the official in charge.

The physician* in attendance at the birth of a child is required, within forty-eight hours, to give notice and make a complete return within fifteen days of the facts required for record to the clerk of the city or town in which such birth occurred. Parents, within forty days, are required to give notice to the registration official of every child born to them.

In addition to the above, persons in charge of a hospital, almshouse, or other institution, public or private, are required to give, on or before the fifth day of each month, notice to the town clerk of every birth occurring among the persons in such institution during the preceding month. The law also provides that the clerk of each town may annually in January ascertain the facts required for record of all children born in his town during the preceding year and resident therein.

The records on file in the Division of Vital Statistics are attested copies of the originals filed with the local officials. The law has required the filing at this central record office since 1841. During this time 5,213,453 births have been registered and the annual registration report issued. Since the establishment of the office of State Registrar of Vital Statistics in 1918, a systematic campaign has been carried on to obtain prompt and complete compliance with the birth registration laws. If people generally realized the importance of birth records, complete registration would soon be an accomplished fact.

There is hardly a relation of life, social, legal, or economic, in which the evidence furnished by an accurate registration of births may not prove to be of the greatest value, not only to the individual, but also to the public at large. It is not only an act of civilization to register Birth Certificates, but also good business, for they are frequently used in many practical ways:

1. As evidence to prove the age and legitimacy of heirs;
2. As proof of age to determine the validity of a contract entered into by an alleged minor;
3. As evidence to establish age and proof of citizenship and descent; in order to vote;
4. As evidence to establish the right of admission to the professions and to many public offices;
5. As evidence of legal age to marry;
6. As evidence to prove the pension claims of widows and orphans;
7. As evidence to determine the liability of parents for the debts of a minor;

* Midwives are not recognized in Massachusetts. It has been held that the practice of midwifery is the practice of medicine, and as there is no provision under the law for licensing midwives, any one who practices midwifery is violating the medical registration laws.

8. As evidence in the administration of estates, the settlement of insurance and pensions;

9. As evidence to prove the irresponsibility of children under age for crime and misdemeanor, and various other matters in the criminal code;

10. As evidence in the enforcement of laws relating to education and to child labor;

11. As evidence to determine the relations of guardians and wards;

12. As proof of citizenship in order to obtain a passport;

13. As evidence in the claim for exemption from or the right to jury and militia service.

Copies of records of births occurring during the preceding year are forwarded to the Division of Vital Statistics on or before March 1st, April 1st and May 1st of the year following; the time depending upon the size of the city or town making the return.

After the statutory period has elapsed for filing copies of the records with the Department of the Secretary of the Commonwealth, no delayed returns or corrections can be accepted unless supported by a deposition made by the parents, physician, or at the discretion of the town clerk of responsible persons with knowledge of the facts, or based upon a writing made at the time by a person since deceased charged with making the return in the first instance. As the evidential value of a record depends for its authenticity upon the fact that it is made contemporaneously with the happening of the event recorded, the registrars are urged to exercise considerable care in accepting delayed returns for records, particularly if it is some years after the birth occurred. This holds true of corrections which can only be made in accordance with the facts as they actually existed at the time the birth occurred, with the exception of an illegitimate child who is legitimized through the subsequent marriage of its parents; in these cases the record may be corrected in accordance with Chapter 281 of the Acts of 1925, so that the child will appear on the record as the legitimate offspring of its parents. Chapter 169, Acts of 1930 and Chapter 258, Acts of 1931 provide for correction of birth records of illegitimate children who have acquired new names by judicial decree.

As a means of eliminating errors from physicians' returns of births, many local registrars are sending a supplemental report of the physician's return to the parents for their approval; and when the certificate is returned properly signed by a parent, it is filed with the physician's certificate. Many cities and towns have already adopted this follow-up system, and an attempt is being made to institute this method throughout Massachusetts.

Live Births.—In the Commonwealth in 1933 there were 63,457 live births, a decrease of 5,061, or 8 per cent as compared with the number registered in 1932. There was a decrease in 1933 of 1,385, or 3.4 per cent in the number of infants born to native parents; 2,362, or 17.9 per cent, to foreign-born parents; and 1,323, or 9.4 per cent, to mixed parents, namely, one parent native, the other foreign-born, as compared with 1932.

Birth Rate.—In proportion to the total population, the total live births were equivalent to a rate of 14.7 per 1,000 population, the lowest rate ever recorded in the Commonwealth. This was 1.2 per 1,000 lower than that recorded in 1932, and 2.4 per 1,000 below the average for the five years 1928 to 1932.

Changes in Birth Rate.—The birth rate for the Commonwealth attained the highest point on record, 30.2 in the year 1857. Since then the rate, although fluctuating considerably, has shown a considerable decline, and a steady decline since 1924, notwithstanding an improvement in the registration. Although the birth rate has been smaller in recent years, the infant death rate has also declined, the infant mortality rate for 1933 being the lowest ever recorded, so that the number of babies who survive the dangers of infancy is becoming steadily greater. This fact is strikingly shown in the infant mortality tables.

Stillbirths.—Stillbirths registered in 1933 number 2,173, a decrease of 177, or 7.5 per cent, as compared with 1932. The rate per 1,000 live births was 34.2 in 1933; 34.3 in 1932; 35.2 in 1931 and 1930; 34.3 in 1929; and 35.7 in 1928.

Birth Rates, Highest.—The six municipalities having 15,000 inhabitants or more showing the highest birth rates in 1933 are: Norwood, 27.1; Boston, 20.8; Framingham, 19.2; Cambridge, 19.1; Waltham and Northampton, 18.9.

The city of Boston has the highest birth rate (20.8) of any place in the State of over 100,000 population. High birth rates, however, do not necessarily indicate satisfactory increases in population, since high rates of infant and childhood mortality may nullify the effect of high birth rates.

Variations in the birth rates of different communities may be partially accounted for by differences in the proportions of married women of child-bearing age residing therein, and by the presence of hospitals to which expectant mothers go from neighboring cities and towns in order to take advantage of the best medical advice and obstetrical care during pregnancy and childbirth.

Sex Proportion at Birth. — It has never been determined whether the higher proportion of masculine than of feminine births is the result of definite causes or not. The fact remains that this phenomenon is invariably true. Births of males in 1933 numbered 32,462, and those of females 30,995, corresponding to a ratio of 1,047 male births to 1,000 female births.

Nativity of Parents. — The number of births where both parents were native (39,907) exceeded the number of births where both parents were foreign-born (10,818) by 29,089, or 268.9 per cent in 1933. Children born of mixed parents (one parent native and one parent foreign-born) numbered 12,716 in 1933, as compared with 14,039 in 1932.

The proportion of children born of native parents declined from 1890 until about 1910, since then, the proportion has steadily increased. In 1933 the proportion was 62.9 per cent.

The proportion of children born of parents one of whom was native and the other foreign-born was 20.0 in 1933, as compared with 20.5 in 1932. The number of children born of parents whose nativity was not reported on the birth certificate was 16 in 1933.

Plural Births. — In 1933 there were 649 plural births, 645 pairs of twins, 4 cases of triplets, or 10.2 pairs of twins per 1,000 live births, and .1 case of triplets per 1,000 live births.

Natural Increase. — The excess of the birth rate over the death rate shows the ratio at which the community is reproducing itself by natural increases. In every year since the compilation of birth statistics was started the birth rate has been higher than the death rate.

The rate of natural increase for 1933 was 2.9 per 1,000 population, and averaged 5.3 for the five years 1928 to 1932.

Notwithstanding the decline in the birth rate in recent years, the number of births is greatly in excess of the number of deaths; and this fact, coupled with the steady decrease in infant mortality, has resulted in a net gain in the natural increase in population. The excess of births over deaths amounts to 24.8 per cent in 1933, as compared with 38.3 in 1932, 42.3 in 1931, 48.9 in 1930, 42.1 in 1929, and 53.7 in 1928.

For comparisons previous to 1900 relative to the natural increase from 1851, and for figures from that date up to and including 1919, reference may be made to the Annual Report of Vital Statistics of Massachusetts for the year ending Dec. 31, 1919, Public Document No. 1.

INTRODUCTION.

Marriage Registration. — As in the case of births and deaths the public registration of marriages has been required for many years in Massachusetts. Records of marriage are made in the first instance in the cities and towns of the State where the contracting parties dwell and where the ceremony is performed.

Since 1841 it has been required that copies of these records be forwarded annually to the Secretary of the Commonwealth and from 1841 to 1933, inclusive, there have been 4,865,935 marriages reported, recorded and tabulated in this department.

Accuracy. — The registration of marriages presents fewer difficulties than the registration of birth and death records and the statistics should be nearly 100 per cent perfect.

Source of Data. — The marriage statistics in this report are compiled from attested copies of the records of marriages recorded in every city and town. Persons intending to be joined in marriage in Massachusetts must file a notice of intention in the town in which they respectively dwell, and this notice of intention must contain the facts required for record and be sworn to by each of the parties to the marriage. If a marriage is performed in a town other than the town issuing the license, a copy of the license must be made and forwarded by the clergyman or magistrate to the clerk of the municipality in which the ceremony was performed. Five days after the notice of intention is filed the marriage license may be issued with all the facts set forth in the notice of intention which are required for record. This certificate is presented to the clergyman or magistrate before whom the marriage is performed, and the facts as to the ceremony are certified by that person. Between the first and tenth days of the month following the ceremony the license or licenses must be returned to the office or offices issuing the same.

A marriage may be solemnized in any place within the Commonwealth by a minister of the gospel who resides in the Commonwealth, or, who if a nonresident is the pastor of a church or denomination duly established in the Commonwealth and who is recognized by his church or denomination as duly ordained and in good and regular standing as a minister of such church or denomination; by a rabbi of the Israelitish faith, duly licensed by a congregation of said faith established in the Commonwealth, who has filed with the clerk or registrar of the city or town where such congregation is established a certificate of the establishment of the synagogue therein, the date of his appointment thereto, and of the term of his engagement; by a justice of the peace if he is also clerk or assistant clerk of a city or town, or a registrar or assistant registrar, in the city or town where he holds such office, or, if he is also clerk or assistant clerk of a court, in the city or town where the court is authorized to be held, or, if he has been designated as a justice of the peace to solemnize marriages in the city or town where he resides; and it may be solemnized among Friends or Quakers according to the usage of their societies; and a specified marriage may be performed by a non-resident clergyman commissioned by the Governor in accordance with the provisions of Chap. 102 of the Acts of 1926; but no person shall solemnize a marriage in the Commonwealth unless he can read and write the English language.

The principal source of error in the records of marriage comes about through the carelessness or ignorance of one of the parties in filing the notice of intention as to the facts concerning the other party. Therefore, it sometimes happens that records for the same marriage coming from different towns do not contain the same information. Names and other facts will be at variance. These certificates are compared in the Division of Vital Statistics and every effort is made to have the certificates agree, but considerable confusion and delay follow from this situation.

Purpose. — The practical purposes of marriage records are:

1. As evidence to establish dower and curtesy rights of husband and wife.
2. To prove legality as to claims of inheritance.
3. As evidence upon which to base subsequent records concerning the parties.
4. For Governmental pension purposes.
5. For pensions under Employees Pension Laws.
6. For insurance, pension and retirement purposes.
7. To establish legal settlement for public aid and the settlement of dependent children of parents.
8. For naturalization and passport purposes.
9. To prove legitimacy of children.

Every precaution has been taken to see that the statutes pertaining to the solemnization of marriage are strictly enforced, but because no public registration of ministers of the gospel is required in Massachusetts, it is not always possible to get in touch with the persons responsible for making returns of marriages solemnized by them. To guard against the possibility of marriages being performed on one license where two are required, on an out-of-state license, or on a license that has become invalid because of lapse of time, a circular setting forth the requirements before and after solemnizing a marriage has been prepared, together with copy of the marriage laws and these are forwarded, upon request, to all persons interested, and are sent to the city and town clerks together with posters setting forth the legal impediments to marriage which are posted in their offices.

The errors in solemnizing and returning a record of marriage, if any, are due to the lack of information as to the requirements of the statute rather than to any wilful attempt to evade the requirements of the law.

Marriage licenses issued to residents are valid throughout the Commonwealth, regardless of the residence of either party and many marriages are performed in cities and towns other than the place where either party lived. Persons who do not reside in the Commonwealth must file their intention with the clerk of the city or town where they propose to have the marriage solemnized and the marriage must be solemnized in that particular municipality.

The following tables contain the number of marriages solemnized:

INTRODUCTION.

Causes for Divorce. — Causes for which divorce from the bonds of matrimony may be granted in Massachusetts under the provisions of chapter 208, Sections 1 and 2 of the General Laws, are as follows: —

1. Adultery.
2. Impotency.
3. Desertion for three consecutive years next prior to the filing of the libel.
4. Gross and confirmed habits of intoxication caused by the voluntary and excessive use of intoxicating liquor, opium or other drugs.
5. Cruel and abusive treatment.
6. Neglect to provide.
7. Sentence to imprisonment at hard labor for five years or more.

A marriage may be declared void in consequence of violation of the provisions of the laws concerning marriage; that is, a separation may be granted because of the demonstration of conditions obtaining at the time of, or previous to, the alleged marriage, which show that there never was a legal marriage.

Source of Data. — The statistics of divorce presented in this report are compiled from returns made to the Secretary of the Commonwealth annually by the clerks of courts and registers of probate for the several counties.

In Massachusetts there is no central record office for divorces, the statistics only being returned as stated above. The records remain with the clerks or registers.

Previous to 1922 the superior court only had jurisdiction in such matters, and the filing of returns was in compliance with chapter 208, Sections 46 and 47 of the General Laws. By the provisions of chapter 465 of the Acts of 1921, it was provided in Section 2 that any divorce case in which the libellee has not filed appearance within the time limited should be transferred to the probate court of the county where such case was entered. By chapter 532 of the Acts of 1922 the probate court was given concurrent jurisdiction with the superior court to hear libels for divorce and to determine the same in a similar manner. This Act took effect on *October 1, 1922*.

Applications for Divorce. — The courts granted over 4 petitions out of every 5 filed. This proportion fluctuated considerably during the twenty-five years from 1909 to 1933, the highest proportion of applications being granted in 1924 (89.5 per cent), and the lowest proportion in 1929 (71.1 per cent). During this entire period 82.4 per cent of all applications were granted, .6 per cent were refused, and 17.0 per cent were dismissed.

Contested Cases. — Of the total number of applications for divorces during the twenty-five years from 1909 to 1933, only 17.2 per cent were contested. In 1933 of the 3,731 applications for divorce, only 1,093, or 29.3 per cent, were contested, and of the 3,210 divorces granted, 811, or 25.3 per cent, were contested. The proportion of contested cases is larger for divorces granted to the wife (26.2 per cent) than for those granted to the husband (22.6 per cent).

Number of Divorces. — Divorces granted in 1933 numbered 3,210, a decrease of 333, or 9.4 per cent less than the number granted in 1932, and 288 less than the average number granted for the five-year period 1925 to 1929.

Divorce Rates. — The number of divorces granted per 100,000 population was 74.3, as compared with 82.5 in 1932, 84.8 in 1931, 88.1 in 1930, and 81.6 in 1929.

Divorce rates based on the married population, i.e., the number of divorces per 100,000 married population, are more significant than rates based upon the total population, because of the elimination of possible variations in the proportion married, and because of the fact that divorce can arise only among the married. Rates calculated in this manner are shown in Table 58, page 185, for the census years 1900 to 1925. In this table the number of divorces shown for the census years 1900 to 1925 is not the actual number in that year, but the annual average for the five-year period of which the census year is the median. This method eliminates any peculiarities in the census year which may have affected divorce and makes the figures more typical of the period as a whole.

Party to Which Granted. — Over two-thirds (72.7 per cent) of the total number of divorces in the period 1909 to 1933 were granted to the wife. In other words, divorces obtained by the wife are more than twice as numerous as those obtained by the husband. This difference may be partially explained by the fact that without any reference to the question of which party is the more frequently responsible for the marital unhappiness, the wife has tangible ground for divorce more frequently than the husband, because certain well known and comparatively common grounds are more readily applicable against the husband than against the wife. For example, cruelty, in so far as it is physical cruelty, is not ordinarily an available ground for a husband, although men are sometimes granted divorces on this ground.

The proportion of divorces granted to the wife fluctuated between 69.3 per cent in 1913, and 75.3 in 1931, as compared with 72.7 per cent for the entire period of 1909 to 1933.

Divorces Classified by Causes. — The statistics concerning the cause of divorce deal with the legal cause as ascertained from the court records. It should be borne in mind, however, that the cause for which a divorce is granted by the courts is not necessarily the underlying reason for the marital unhappiness, and that the value of statistics of divorce as an index to the actual causes is as a consequence impaired.

Divorces granted on the ground of desertion have nearly doubled in the twenty-five-year period 1909 to 1933, while the number of divorces granted for adultery has decreased slightly.

The most common ground on which divorce was granted by the courts was desertion, which accounted for 46.5 per cent of all the divorces granted in the period 1909 to 1933, for 38.7 per cent of all those granted to the husband in this period, and for 61.3 per cent of those granted to the wife.

The number and per cent of divorces granted for all causes, to the husband and to the wife, for the twenty-five-year period 1909 to 1933, are shown in Table 60, page 186.

Annulled Cases. — Among the less important classes of cases appears the term "Annulments." In 754 cases, or one per cent of the total number of divorces granted during the period 1909 to 1933, there was some cause shown which may have existed at the time of marriage. These cases form but a small proportion of all cases considered, and do not affect the results to any material degree.

Duration of Marriages. — The average number of years libellants were married at the time of application for divorce has fluctuated between 10.4 years in 1933 and 11.2 years in 1909. The average number of years the libellants were married in 1933 was 10.4.

Of the total libellants in Massachusetts for whom the number of years married was reported in 1933, 57.2 per cent made application for divorce before they had been married ten years, as compared with 55.5 in 1932, 56.4 in 1931, 57.1 in 1930, 56 in 1929, and 54.8 for the twenty-five-year period 1909 to 1933.

PART II. D.

POPULATION STATISTICS

| | PAGE |
|--------------------------------|------|
| Introductory | 189 |
| Estimated population | 189 |
| Statistical table | 190 |

Introductory. — All vital statistics are based upon the population. The number of births, marriages, divorces and deaths is expressed in relation to the population, usually as rates giving the number occurring during the calendar year per 1,000 inhabitants or group of inhabitants, such as age groups, sex, nativity, race, marital condition, and occupation groups.

Information regarding population is obtained by a census enumeration, and in Massachusetts these enumerations are made every five years. The statistics for 1933 in this report are based on the State census taken as of March 31, 1925, and the Federal census taken as of April 1, 1930.

The population of any community or State is continually changing, in most cases increasing, and for this reason it becomes necessary to make estimates of the population for the periods between the census enumerations upon which to base rates for the various vital events, and especially for the accurate computation and expression of birth, marriage, divorce, and death rates. Such estimates are necessary for all dates except those on which the census enumerations are made, and are in all cases preferable to a repetition of the census returns for a certain year.

For non-census years the statistical tables in this book are based upon the estimated population as determined by the arithmetical method, which assumes a constant amount of increase between the census years.

The unexpected result of the national census of 1930, in which the State of Massachusetts shows a gain in population of only 105,409 in the five-year period 1925 to 1930, has made the estimated population for the years 1926, 1927, 1928 and 1929 based on the censuses of the years 1920 and 1925 appear almost absurd and made it necessary to revise the figures for that period.

Estimated Population. — The method of calculating estimates of population for the intercensal years is shown in the following example:

Massachusetts had a population of 4,249,614 at the Federal census of 1930 (April 1), and of 4,144,205 at the State census of 1925 (March 31). The increase during the intercensal period (60 months) was 105,409, and the monthly increase according to the arithmetical method of estimating population, was —

$$\begin{array}{r} 4,249,614 - 4,144,205 \\ \hline 60 \end{array} = 1,757$$

The same annual increase is also assumed to occur until the next census shall have been taken. The population for June 30, 1933, is estimated by adding to the population as it existed at the preceding census (April 1, 1930), 1,757 for each month intervening between the date of enumeration and the date for which the estimate is desired (June 30, 1933). There being 39 months between these dates, the calculation would be

$$4,249,614 + (39 \times 1,757) = 4,318,137.$$

The census population for each municipality in the Commonwealth having over 15,000 inhabitants in 1930 is shown on page 190.

Table 66

CENSUS POPULATION OF MUNICIPALITIES HAVING OVER
15,000 INHABITANTS IN 1930: 1905 TO 1930.

| MUNICIPALITIES. | April 1, 1930. | March 31, 1925. | January 1, 1920. | April 1, 1915. | April 15, 1910. | May 1, 1905. |

¹Hyde Park (in Norfolk County), annexed to Boston (in Suffolk County) in 1911, contained 15,507 inhabitants in 1910, 14,510 in 1905, and 13,244 in 1900. No other counties have had their boundaries changed since 1874.

²Abnormal decrease between 1905 and 1910 due to conflagration of April 12, 1908.

³Abnormal decrease between 1910 and 1915 due to conflagration of June 25, 1914.

APPENDIX

INTERNATIONAL CLASSIFICATION OF CAUSES OF DEATH

1. DETAILED INTERNATIONAL LIST
2. ABRIDGED INTERNATIONAL LIST

INTERNATIONAL CLASSIFICATION OF CAUSES OF DEATH.¹

There are two separate and distinct classifications of causes of death embodied in the International List of Causes of Death: these are the detailed and abridged International Lists. The former, as indicated by its name, presents causes of death in greater detail than does the latter; that is, it shows separately certain diseases which in the abridged list are grouped together for presentation. The majority of the titles of the abridged list are therefore consolidations of certain titles of the detailed list. The shorter list is used as a basis for certain tables in this volume for which it is either unnecessary or impracticable to present data for each disease and cause of death shown in the detailed list.

The distinction between these lists should always be considered when using the tables of these reports. There are several cases in which the title headings in the two lists are identical, but the causes included are widely at variance. As an example of this, the title "Other infectious and parasitic diseases" of the detailed list (title No. 44) includes only such epidemic maladies as are not classified separately in titles 1 to 44 of that list; but "Other infectious and parasitic diseases" of the abridged list includes titles 4, 5, 12, 13, 15, 16, 17, 18, 19, 20, 21, 22, 33, 35, 36, 37, 39, 40, 41, 42, 43, and 44 of the detailed list.

An asterisk (*) denotes that, in the opinion of the committee appointed by the Section on Vital Statistics of the American Public Health Association, the titles are acceptable statements of causes of death without autopsy.

The following table shows each title of the Detailed International List:—

1. DETAILED INTERNATIONAL LIST.

| I. INFECTIOUS AND PARASITIC DISEASES. | I. INFECTIOUS AND PARASITIC DISEASES. —Cont. |
|--|---|
| 1. Typhoid fever.* | 13. Dysentery. ³ |
| 2. Paratyphoid fever.* | (a) Amebic. |
| 3. Typhus fever.* | (b) Bacillary. |
| 4. Relapsing fever. ² | (c) Unspecified or due to other causes. |
| 5. Undulant fever. | 14. Plague.* |
| 6. Smallpox.* | (a) Bubonic. |
| 7. Measles.* | (b) Pneumonic. |
| 8. Scarlet fever.* | (c) Septicemic. |
| 9. Whooping cough.* | (d) Unspecified. |
| 10. Diphtheria.* | 15. Erysipelas.* |
| 11. Influenza. | 16. Acute poliomyelitis and acute polioencephalitis.* |
| (a) With respiratory complications specified. | 17. Lethargic or epidemic encephalitis. |
| (b) Without respiratory complications specified. | 18. Epidemic cerebrospinal meningitis. |
| 12. Cholera. | 19. Glanders. ⁴ |

¹ The second decennial revision of the International Classification of Causes of Death was made at Paris, July 1 to 3, 1909. The next revision was also made at Paris, Oct. 11 to 14, 1920, and was used beginning with 1921. The causes of death as given in the third revision number 205, compared with 179 in the first, and 189 in the second classification. The fourth revision of the International List of Causes of Death is largely a revision of the previous edition and is based upon the translation of the official French version of the proceedings of the International Commission of 1929.

² This statement is a reliable one, without autopsy, only when the statement of the cause of death is accompanied or supported by a record of the finding of the etiological factor, that is, the *Spirillum* (*Spirachat*) *obermeieri*, before death.

³ Not a reliable statement of cause of death unless the specific cause of infection has been identified.

⁴ Not a reliable statement of cause of death, without autopsy, unless there is an accompanying record of the finding of the etiological factor; i.e., the *bacillus mallei*.

DETAILED INTERNATIONAL LIST — *Continued.*

I. INFECTIOUS AND PARASITIC DISEASES.

—*Cont.*

20. Anthrax (*bacillus anthracis*) malignant pustule.¹
21. Rabies.²
22. Tetanus.³
23. Tuberculosis of the respiratory system.*
24. Tuberculosis of the meninges and central nervous system.⁴
25. Tuberculosis of the intestines and peritoneum.⁵
26. Tuberculosis of the vertebral column.*
27. Tuberculosis of the bones and joints (vertebral column excepted).⁶
 - (a) Tuberculosis of the bones.
 - (b) Tuberculosis of the joints.
28. Tuberculosis of the skin and subcutaneous cellular tissues.⁶
29. Tuberculosis of the lymphatic system (bronchial, mesenteric, and retroperitoneal glands excepted).⁶
30. Tuberculosis of the genitourinary system.⁶
31. Tuberculosis of the other organs.⁶
32. Disseminated tuberculosis.*
 - (a) Acute.
 - (b) Chronic.
 - (c) Unspecified.
33. Leprosy.*
34. Syphilis.⁷
35. Gonococcus infection and other venereal diseases.⁸
36. Purulent infection, septicemia (nonpuerperal).
37. Yellow fever.*
38. Malaria.⁹
39. Other diseases due to protozoal parasites.
40. Ankylostomiasis.¹⁰
41. Hydatid cysts.
 - (a) Of the liver.
 - (b) Of other organs.
42. Other diseases caused by helminths.¹¹
43. Mycoses.¹²
44. Other infectious and parasitic diseases.
 - (a) Chicken-pox.
 - (b) German measles.
 - (c) Others under this title.

II. CANCERS AND OTHER TUMORS.

45. Cancer and other malignant tumors of the buccal cavity and pharynx.*
 - (a) Cancer of the lip.
 - (b) Cancer of the tongue.
 - (c) Cancer of the mouth.
 - (d) Cancer of the jaw.
 - (e) Cancer of other and unspecified parts of the buccal cavity.
 - (f) Cancer of the pharynx.

II. CANCERS AND OTHER TUMORS.—*Cont.*

46. Cancer of the digestive tract and peritoneum.¹³
 - (a) Cancer of the esophagus.
 - (b) Cancer of the stomach and duodenum.
 - (c) Cancer of the intestines (except duodenum, rectum and anus).
 - (d) Cancer of the rectum and anus.
 - (e) Cancer of the liver and biliary passages.
 - (f) Cancer of the pancreas.
 - (g) Cancer of the mesentery and peritoneum.
 - (h) Cancer of others under this title.
47. Cancer of the respiratory system.¹³
 - (a) Cancer of the larynx.
 - (b) Cancer of the lungs and pleura.
 - (c) Cancer of other respiratory organs.
48. Cancer of the uterus.¹³
49. Cancer of other female genital organs.¹³
 - (a) Cancer of the ovary and Fallopian tube.
 - (b) Cancer of the vagina and vulva.
 - (c) Cancer of other female genital organs.
50. Cancer of the breast.*
51. Cancer of the male genitourinary organs.¹³
 - (a) Cancer of the kidneys and supra-renals (male).
 - (b) Cancer of the bladder (male).
 - (c) Cancer of the prostate.
 - (d) Cancer of the testes.
 - (e) Cancer of the scrotum.
 - (f) Cancer of other male genitourinary organs.
52. Cancer of the skin.*
53. Cancer of other or unspecified organs.¹³
 - (a) Cancer of the kidneys and supra-renals (female).
 - (b) Cancer of the bladder (female).
 - (c) Cancer of the brain.
 - (d) Cancer of the bones (except jaw).
 - (e) Cancer of other or unspecified organs.
54. Nonmalignant tumors.*¹³
 - (a) Tumors of the ovary.
 - (b) Tumors of the uterus.
 - (c) Tumors of other female genital organs.
 - (d) Tumors of the brain.
 - (e) Tumors of other organs.
55. Tumors of which the nature is not specified.*¹³
 - (a) Tumors of the ovary (nature unspecified).
 - (b) Tumors of the uterus (nature unspecified).
 - (c) Tumors of other female genital organs (nature unspecified).
 - (d) Tumors of the brain (nature unspecified).
 - (e) Tumors of other organs (nature unspecified).

¹ Not a reliable statement of cause of death, without autopsy, or without determination of the etiological factor; i.e., the *bacillus anthracis*.

² Not a reliable statement of cause of death unless verified by autopsy, or proof that the infecting bite was by a proved rabid animal.

³ A reliable statement of cause of death, without autopsy, when it is accompanied by information as to date, site, nature, and means of injury.

⁴ A reliable statement of cause of death, without autopsy, for children under 10 years of age, but not for decedents of older groups, unless there is confirmatory bacteriological proof of the presence of the tubercle bacillus in the spinal fluid.

⁵ An unreliable statement of cause of death, without autopsy, unless proof of an abdominal operation or recovery of tubercle bacillus from the abdominal fluid is presented.

⁶ Statements of cause of death which relate to organs or parts of the body which are accessible to direct vision are reliable without autopsy.

⁷ Not reliable as a statement of cause of death, without autopsy, unless diagnosis was based on lesions superficially situated or visible through body orifices, or confirmed by unquestioned specific test. A statement of the site, extent, and character of the lesion should be given.

⁸ An unreliable statement of cause of death, without autopsy, unless a gonococcal lesion has been demonstrated by the recovery of the gonococcus from the site of the lesion, or by a specific serum reaction, and unless the lesion was an adequate cause of death.

⁹ Not a reliable statement of cause of death without the supporting statement that the etiological factor, the *Plasmodium malariae*, was found in the blood before death or at autopsy.

¹⁰ A reliable statement of cause of death, without autopsy, provided the infectious parasite *ankylostoma duodenale* or its ova have been demonstrated.

¹¹ A reliable statement of cause of death, without autopsy, only with the demonstration of the parasite or its ova in the tissues or discharges.

¹² A reliable statement of cause of death, without autopsy, only when lesion is accessible to direct examination, or the etiological factor has been identified in the discharges before death.

¹³ An unreliable statement of cause of death, without autopsy, unless an operation was performed or the neoplasm was otherwise visible or accessible for direct observation.

DETAILED INTERNATIONAL LIST — *Continued.*

III. RHEUMATIC DISEASES, NUTRITIONAL DISEASES, DISEASES OF THE ENDOCRINE GLANDS AND OTHER GENERAL DISEASES.

56. Acute rheumatic fever.*
57. Chronic rheumatism, osteoarthritis.
58. Gout.
59. Diabetes mellitus.*
60. Scurvy.*
61. Beriberi.*
62. Pellagra.*
63. Rickets.*
64. Osteomalacia.
65. Diseases of the pituitary body.
66. Diseases of the thyroid and parathyroid glands.
 - (a) Simple goiter.
 - (b) Exophthalmic goiter.
 - (c) Myxedema and cretinism.
 - (d) Tetany.
 - (e) Other diseases of the thyroid and parathyroid glands.
67. Diseases of the thymus gland.
68. Diseases of the adrenals (Addison's disease not specified as tuberculous).*
69. Other general diseases.

IV. DISEASES OF THE BLOOD AND BLOOD-MAKING ORGANS.

70. Hemorrhagic conditions.
 - (a) Primary purpura.
 - (b) Hemophilia.
71. Anemias.¹
 - (a) Pernicious anemia.
 - (b) Other anemias.
72. Leukemias and pseudoleukemias.²
 - (a) True leukemias.
 - (b) Pseudoleukemias (Hodgkin's disease).
73. Diseases of the spleen.
74. Other diseases of the blood and blood-making organs.

V. CHRONIC POISONINGS AND INTOXICATIONS.

75. Alcoholism (acute or chronic).*
76. Chronic poisoning by other organic substances.³
 - (a) Occupational.
 - (b) Other chronic poisoning by organic substances.
77. Chronic poisoning by mineral substances.
 - (a) Lead.⁴
 - (b) Occupational (except lead).⁵
 - (c) Other chronic poisoning by mineral substances.⁵

VI. DISEASES OF THE NERVOUS SYSTEM AND OF THE ORGANS OF SPECIAL SENSE.

78. Encephalitis (nonepidemic).
79. Meningitis.
 - (a) Simple meningitis.
 - (b) Nonepidemic cerebrospinal meningitis.
80. Progressive locomotor ataxia (tabes dorsalis).*
81. Other diseases of the spinal cord.

VI. DISEASES OF THE NERVOUS SYSTEM AND OF THE ORGANS OF SPECIAL SENSE.—*Cont.*

82. Cerebral hemorrhage, cerebral embolism and thrombosis.
 - (a) Cerebral hemorrhage.
 - (b) Cerebral embolism and thrombosis.
 - (c) Softening of the brain.
 - (d) Hemiplegia and other paralysis, cause unspecified.
83. General paralysis of the insane.*
84. Dementia praecox and other psychoses.
85. Epilepsy.⁶
86. Convulsions (under 5 years of age).
87. Other diseases of the nervous system.*
 - (a) Neuralgia and neuritis.
 - (b) Other diseases of the nervous system.
88. Diseases of the organs of vision.*
89. Diseases of the ear and mastoid process.*
 - (a) Diseases of the ear.
 - (b) Diseases of the mastoid process.

VII. DISEASES OF THE CIRCULATORY SYSTEM.

90. Pericarditis.⁷
91. Acute endocarditis.*
 - (a) Specified as acute.
 - (b) Unspecified (under 45 years of age).
92. Chronic endocarditis, valvular diseases.*
 - (a) Endocarditis, specified as chronic, and other valvular diseases.
 - (b) Endocarditis, unspecified (45 years and over).
93. Diseases of the myocardium.*
 - (a) Acute myocarditis.
 - (b) Myocarditis, unspecified (under 45 years).
 - (c) Chronic myocarditis and myocardial degeneration.
 - (d) Unspecified.
94. Diseases of the coronary arteries and angina pectoris.*
 - (a) Angina pectoris.
 - (b) Diseases of the coronary arteries.
95. Other diseases of the heart.*
 - (a) Functional diseases of the heart.
 - (b) Other and unspecified.
96. Aneurysm (except of the heart).
97. Arteriosclerosis (diseases of the coronary arteries excepted).
98. Gangrene.
99. Other diseases of the arteries.*
100. Diseases of the veins (varices, hemorrhoids, phlebitis, etc.).⁸
101. Diseases of the lymphatic system (lymphangitis, etc.).*
102. Idiopathic anomalies of the blood-pressure.
103. Other diseases of the circulatory system.*

VIII. DISEASES OF THE RESPIRATORY SYSTEM.

104. Diseases of the nasal fossæ and annexæ.*
105. Diseases of the larynx.*
106. Bronchitis.
 - (a) Acute.
 - (b) Chronic.*
 - (c) Unspecified (under 5 years of age).
 - (d) Unspecified (5 years and over).

¹ An unreliable statement of cause of death, without autopsy, unless an operation was performed.

² Not a reliable statement of cause of death unless verified by confirmatory blood examination.

³ A reliable statement of cause of death, without autopsy, *only* when the source of the poison is specified, or when there is chemical or microscopic proof of the presence of the poison within the body.

⁴ A reliable statement of cause of death, without autopsy, *if* there appears a statement of an occupation in which decedent would be subject to lead poisoning, or if the source of the poisoning is specified and complications accompanying, sufficient to cause death, are described.

⁵ A reliable statement of cause of death, without autopsy, *only* in cases where the occupation or source of the poison is specified and it is indicated that the poison was absorbed as a result of occupation; or the characteristic lesions are superficially located or accessible to direct inspection; or there is chemical or microscopic proof of the presence of poison within the body.

⁶ An unreliable statement of cause of death, without autopsy, unless death occurred in an epileptic attack and was witnessed, and there was a previous history of epilepsy.

⁷ An unreliable statement of cause of death, without autopsy, unless accompanied by a statement of primary cause or of the character of exudate obtained by paracentesis.

⁸ A reliable statement of cause of death, without autopsy, if there is an accompanying statement of the site of the lesion or name of the vessel or vessels involved.

DETAILED INTERNATIONAL LIST — *Continued.*

VIII. DISEASES OF THE RESPIRATORY SYSTEM —

Cont.

107. Bronchopneumonia (including capillary bronchitis).^{*}
 - (a) Bronchopneumonia.
 - (b) Capillary bronchitis.
108. Lobar Pneumonia.
109. Pneumonia, unspecified.
110. Pleurisy.^{*}
111. Congestion, edema, embolism, hemorrhagic infarct, and thrombosis of the lung.¹
 - (a) Pulmonary embolism and thrombosis.
 - (b) Others under this title.
112. Asthma.
113. Pulmonary emphysema.^{*}
114. Other diseases of the respiratory system (tuberculosis excepted).^{*}
 - (a) Chronic interstitial pneumonia, including occupational diseases of the respiratory system.
 - (b) Others, including gangrene of the lung.

IX. DISEASES OF THE DIGESTIVE SYSTEM.

115. Diseases of the buccal cavity and annexa and of the pharynx and tonsils (including adenoid vegetations).^{*}
 - (a) Diseases of the pharynx and tonsils.
 - (b) Others under this title.
116. Diseases of the esophagus.^{*}
117. Ulcer of the stomach and duodenum.
 - (a) Ulcer of the stomach.
 - (b) Ulcer of the duodenum.
118. Other diseases of the stomach (cancer excepted).
119. Diarrhea and enteritis (under 2 years of age).^{*}
120. Diarrhea and enteritis (2 years and over).
121. Appendicitis.
122. Hernia, intestinal obstruction.
 - (a) Hernia.²
 - (b) Intestinal obstruction.³
123. Other diseases of the intestines.
124. Cirrhosis of the liver.^{*}
 - (a) Specified as alcoholic.
 - (b) Not specified as alcoholic.
125. Other diseases of the liver (including yellow atrophy of liver).^{*}
 - (a) Yellow atrophy of liver.
 - (b) Others under this title.
126. Biliary calculi.^{*}
127. Other diseases of the gall-bladder and biliary passages.
128. Diseases of the pancreas.
129. Peritonitis, cause not specified.

X. DISEASES OF THE GENITOURINARY SYSTEM.

130. Acute nephritis (including unspecified under 10 years of age).
131. Chronic nephritis.^{*}
132. Nephritis, unspecified (10 years and over).^{*}
133. Other diseases of the kidneys and ureters (puerperal diseases excepted).
134. Calculi of the urinary passages.^{*}
135. Diseases of the bladder (tumors excepted).^{*}
136. Diseases of the urethra, urinary abscess, etc.^{*}
 - (a) Stricture of the urethra.
 - (b) Others under this title.
137. Diseases of the prostate.^{*}
138. Diseases of the male genital organs, not specified as venereal.^{*}

X. DISEASES OF THE GENITOURINARY SYSTEM —

Cont.

139. Diseases of the female genital organs, not specified as venereal.^{*}
 - (a) Cysts of the ovary.
 - (b) Other diseases of the ovaries and diseases of the tubes and parametrium.
 - (c) Diseases of the uterus.
 - (d) Nonpuerperal diseases of the breast (cancer excepted).
 - (e) Other diseases of the female genital organs.

XI. DISEASES OF PREGNANCY, CHILDBIRTH AND THE PUERPERAL STATE.

140. Abortion with septic conditions.^{*}
141. Abortion without mention of septic conditions (to include hemorrhages).^{*}
142. Ectopic gestation.^{*}
 - (a) Septic conditions specified.
 - (b) Septic conditions not mentioned.
143. Other accidents of pregnancy (not to include hemorrhages).^{*}
144. Puerperal hemorrhage.^{*}
 - (a) Placenta praevia.
 - (b) Other puerperal hemorrhages.
145. Puerperal septicemia (not specified as due to abortion).^{*}
 - (a) Puerperal septicemia and pyemia.
 - (b) Puerperal tetanus.
146. Puerperal albuminuria and eclampsia.^{*}
147. Other toxemias of pregnancy.^{*}
148. Puerperal phlegmasia alba dolens, embolus, sudden death (not specified as septic).^{*}
149. Other accidents of childbirth.^{*}
 - (a) Cesarean operation.
 - (b) Others under this title.
150. Other and unspecified conditions of the puerperal state.^{*}

XII. DISEASES OF THE SKIN AND CELLULAR TISSUE.

151. Furuncle, carbuncle.⁴
152. Phlegmon, acute abscess.⁴
153. Other diseases of the skin and annexa, and of the cellular tissue.^{*}

XIII. DISEASES OF THE BONES AND ORGANS OF LOCOMOTION.

154. Osteomyelitis.^{*}
155. Other diseases of the bones (tuberculosis excepted).^{*}
156. Diseases of the joints and other organs of locomotion.^{*}
 - (a) Diseases of the joints (tuberculosis and rheumatism excepted).
 - (b) Diseases of other organs of locomotion.

XIV. CONGENITAL MALFORMATIONS.

157. Congenital malformations.^{*}
 - (a) Congenital hydrocephalus.
 - (b) Spina bifida and meningocele.
 - (c) Congenital malformations of the heart.
 - (d) Other congenital malformations.

¹ Pulmonary congestion is considered a reliable statement of cause of death, without autopsy, only when the cause is specified; as, for example, *accidental inhalation of irritating fumes*, or accompanying lesions which are known to lead to congestion of the lungs.

² A reliable statement of cause of death if the hernia is external, or is exposed on operation or autopsy, when internal; also, when conditions adequate to cause of death, together with type and location of hernia, are specified.

³ An unreliable statement of cause of death unless the obstruction is demonstrated on autopsy or operation, or is accessible by examination through the body orifices.

⁴ A reliable statement of cause of death, without autopsy, if there is an accompanying statement of the site and nature of the original infection.

DETAILED INTERNATIONAL LIST — *Continued.*

XV. DISEASES OF EARLY INFANCY.

- 158. Congenital debility.
- 159. Premature birth.*
- 160. Injury at birth.*
 - (a) Cesarean operation.
 - (b) Without Cesarean operation.
- 161. Other diseases peculiar to early infancy.
 - (a) Atelectasis.
 - (b) Icterus of the new-born.
 - (c) Sclerema.
 - (d) Others under this title.

XVI. SENILITY.

162. Senility.

XVII. VIOLENT AND ACCIDENTAL DEATHS.

- 163. Suicide by solid or liquid poisons or by absorption of corrosive substances.¹
 - (a) Suicide by arsenic.
 - (b) Suicide by hydrocyanic acid.
 - (c) Suicide by opium, morphine, laudanum.
 - (d) Suicide by strychnine.
 - (e) Suicide by corrosive sublimate.*
 - (f) Suicide by carbolic acid.*
 - (g) Suicide by lysol.
 - (h) Suicide by other poisons or kind not stated.
- 164. Suicide by poisonous gas.²
- 165. Suicide by hanging or strangulation.*
- 166. Suicide by drowning.*
- 167. Suicide by firearms.*
- 168. Suicide by cutting or piercing instruments.*
- 169. Suicide by jumping from high places.*
- 170. Suicide by crushing.*
- 171. Suicide by other means.*
- 172. Homicide (Infanticide, murder of infants less than one year of age).*
- 173. Homicide by firearms.*
- 174. Homicide by cutting or piercing instruments.*
- 175. Homicide by other means.*
- 176. Attack by venomous animals.*
- 177. Poisoning by food.³
- 178. Accidental absorption of poisonous gas.
- 179. Other acute accidental poisonings (gas excepted).
 - (a) Wood alcohol.
 - (b) Denatured alcohol.
 - (c) Carbolic acid.*
 - (d) Opium, morphine, laudanum.
 - (e) Strychnine.
 - (f) Other poisons or kind not stated.
- 180. Conflagration.*
- 181. Accidental burns (conflagration excepted).*
- 182. Accidental mechanical suffocation.*
- 183. Accidental drowning.*
- 184. Accidental traumatism by firearms (wounds of war excepted).
- 185. Accidental traumatism by cutting or piercing instruments (wounds of war excepted).⁴
- 186. Accidental traumatism by fall, crushing, landslide.*
 - (a) Fall.
 - (b) Crushing, landslide.
- 187. Cataclysm.
- 188. Injuries by animals.*
- 189. Hunger and thirst.*
- 190. Excessive cold.*
- 191. Excessive heat.*
- 192. Lightning.*
- 193. Accidents due to electric currents.
- 194. Other accidents.
 - (a) Foreign bodies.
 - (b) Others under this title.
- 195. Violent deaths of unknown nature.
- 196. Wounds of war.
- 197. Execution of civilians by belligerent armies.
- 198. Legal executions.*

XVIII. ILL-DEFINED CAUSES OF DEATH.

- 199. Sudden death.
- 200. Cause of death not specified or ill-defined.
 - (a) Ill-defined.
 - (b) Not specified or unknown.
- 201. Accidents in mines and quarries.*
 - (a) Accidental absorption of poisonous gas.
 - (b) Accidental burns (conflagration excepted).
 - (c) Accidental mechanical suffocation.
 - (d) Accidental drowning.
 - (e) Accidental traumatism by cutting or piercing instruments.
 - (f) Accidental traumatism by fall.
 - (g) Accidental traumatism by crushing, landslide.
 - (h) Accidents due to electric currents.
 - (k) Foreign bodies.
 - (m) Other accidents.
- 202. Accidents from agricultural machinery.*
 - (a) Accidental absorption of poisonous gas.
 - (b) Accidental burns (conflagration excepted).
 - (c) Accidental mechanical suffocation.
 - (d) Accidental drowning.
 - (e) Accidental traumatism by cutting or piercing instruments.
 - (f) Accidental traumatism by fall.
 - (g) Accidental traumatism by crushing, landslide.
 - (h) Accidents due to electric currents.
 - (k) Foreign bodies.
 - (m) Other accidents.
- 203. Elevator accidents.*
 - (a) Accidental absorption of poisonous gas.
 - (b) Accidental burns (conflagration excepted).
 - (c) Accidental mechanical suffocation.
 - (d) Accidental drowning.
 - (e) Accidental traumatism by cutting or piercing instruments.
 - (f) Accidental traumatism by fall.
 - (g) Accidental traumatism by crushing, landslide.
 - (h) Accidents due to electric currents.
 - (k) Foreign bodies.
 - (m) Other accidents.
- 204. Accidents from machinery used for recreation.*
 - (a) Accidental absorption of poisonous gas.
 - (b) Accidental burns (conflagration excepted).
 - (c) Accidental mechanical suffocation.
 - (d) Accidental drowning.
 - (e) Accidental traumatism by cutting or piercing instruments.
 - (f) Accidental traumatism by fall.
 - (g) Accidental traumatism by crushing, landslide.
 - (h) Accidents due to electric currents.
 - (k) Foreign bodies.
 - (m) Other accidents.
- 205. Other machinery accidents.*
 - (a) Accidental absorption of poisonous gas.
 - (b) Accidental burns (conflagration excepted).
 - (c) Accidental mechanical suffocation.
 - (d) Accidental drowning.
 - (e) Accidental traumatism by cutting or piercing instruments.
 - (f) Accidental traumatism by fall.
 - (g) Accidental traumatism by crushing, landslide.
 - (h) Accidents due to electric currents.
 - (k) Foreign bodies.
 - (m) Other accidents.

¹ A reliable statement of cause of death, without autopsy, if the character of the solid or liquid is specified.² A reliable statement of cause of death, without autopsy, if the character of the gas is specified.³ An unreliable statement of cause of death without supporting data as to a group of accompanying cases or the ingestion of the particular poisonous substances.⁴ An unreliable statement of cause of death without supporting data, such as site and extent of injury.

DETAILED INTERNATIONAL LIST — *Continued.*XVIII. ILL-DEFINED CAUSES OF DEATH—*Cont.*

206. Railroad and automobile collisions.*

- (a) Accidental absorption of poisonous gas.
- (b) Accidental burns (conflagration excepted).
- (c) Accidental mechanical suffocation.
- (d) Accidental drowning.
- (e) Accidental traumatism by cutting or piercing instruments.
- (f) Accidental traumatism by fall.
- (g) Accidental traumatism by crushing, landslide.
- (h) Accidents due to electric currents.
- (k) Foreign bodies.
- (m) Other accidents.

207. Other railroad accidents.*

- (a) Accidental absorption of poisonous gas.
- (b) Accidental burns (conflagration excepted).
- (c) Accidental mechanical suffocation.
- (d) Accidental drowning.
- (e) Accidental traumatism by cutting or piercing instruments.
- (f) Accidental traumatism by fall.
- (g) Accidental traumatism by crushing, landslide.
- (h) Accidents due to electric currents.
- (k) Foreign bodies.
- (m) Other accidents.

208. Street car and automobile collisions.*

- (a) Accidental absorption of poisonous gas.
- (b) Accidental burns (conflagration excepted).
- (c) Accidental mechanical suffocation.
- (d) Accidental drowning.
- (e) Accidental traumatism by cutting or piercing instruments.
- (f) Accidental traumatism by fall.
- (g) Accidental traumatism by crushing, landslide.
- (h) Accidents due to electric currents.
- (k) Foreign bodies.
- (m) Other accidents.

209. Other street car accidents.*

- (a) Accidental absorption of poisonous gas.
- (b) Accidental burns (conflagration excepted).
- (c) Accidental mechanical suffocation.
- (d) Accidental drowning.
- (e) Accidental traumatism by cutting or piercing instruments.
- (f) Accidental traumatism by fall.
- (g) Accidental traumatism by crushing, landslide.
- (h) Accidents due to electric currents.
- (k) Foreign bodies.
- (m) Other accidents.

210. Automobile accidents (primary).*

- (a) Accidental absorption of poisonous gas.
- (b) Accidental burns (conflagration excepted).
- (c) Accidental mechanical suffocation.
- (d) Accidental drowning.
- (e) Accidental traumatism by cutting or piercing instruments.
- (f) Accidental traumatism by fall.
- (g) Accidental traumatism by crushing, landslide.
- (h) Accidents due to electric currents.
- (k) Foreign bodies.
- (m) Other accidents.

XVIII. ILL-DEFINED CAUSES OF DEATH—*Cont.*

211. Motorcycle accidents.*

- (a) Accidental absorption of poisonous gas.
- (b) Accidental burns (conflagration excepted).
- (c) Accidental mechanical suffocation.
- (d) Accidental drowning.
- (e) Accidental traumatism by cutting or piercing instruments.
- (f) Accidental traumatism by fall.
- (g) Accidental traumatism by crushing, landslide.
- (h) Accidents due to electric currents.
- (k) Foreign bodies.
- (m) Other accidents.

212. Other land transportation accidents.*

- (a) Accidental absorption of poisonous gas.
- (b) Accidental burns (conflagration excepted).
- (c) Accidental mechanical suffocation.
- (d) Accidental drowning.
- (e) Accidental traumatism by cutting or piercing instruments.
- (f) Accidental traumatism by fall.
- (g) Accidental traumatism by crushing, landslide.
- (h) Accidents due to electric currents.
- (k) Foreign bodies.
- (m) Other accidents.

213. Water transportation accidents.*

- (a) Accidental absorption of poisonous gas.
- (b) Accidental burns (conflagration excepted).
- (c) Accidental mechanical suffocation.
- (d) Accidental drowning.
- (e) Accidental traumatism by cutting or piercing instruments.
- (f) Accidental traumatism by fall.
- (g) Accidental traumatism by crushing, landslide.
- (h) Accidents due to electric currents.
- (k) Foreign bodies.
- (m) Other accidents.

214. Air transportation accidents.*

- (a) Accidental absorption of poisonous gas.
- (b) Accidental burns (conflagration excepted).
- (c) Accidental mechanical suffocation.
- (d) Accidental drowning.
- (e) Accidental traumatism by cutting or piercing instruments.
- (f) Accidental traumatism by fall.
- (g) Accidental traumatism by crushing, landslide.
- (h) Accidents due to electric currents.
- (k) Foreign bodies.
- (m) Other accidents.

2. ABRIDGED INTERNATIONAL LIST.

The following table shows each title of the Abridged International List. The numbers of the titles of the Detailed International List included in each title of the abridged list appear in parentheses.

Abridged
Int. List
Number.

CAUSE OF DEATH.

1. Typhoid and paratyphoid fever (1, 2).*
2. Typhus fever (3).*
3. Smallpox (6).*
4. Measles (7).*
5. Scarlet fever (8).*
6. Whooping cough (9).*
7. Diphtheria (10).*
8. Influenza (11).
9. Plague (14).*
10. Tuberculosis of the respiratory system (23).*
11. Other forms of tuberculosis (24, 25, 26, 27, 28, 29, 30, 31, 32).
12. Syphilis (34).
13. Malaria (38).
14. Other infectious and parasitic diseases (4, 5, 12, 13, 15, 16, 17, 18, 19, 20, 21, 22, 33, 35, 36, 37, 39, 40, 41, 42, 43, 44).
15. Cancer and other malignant tumors (45, 46, 47, 48, 49, 50, 51, 52, 53).
16. Tumors, nonmalignant, or of which the nature is not specified (54, 55).*
17. Chronic rheumatism and gout (57, 58).
18. Diabetes mellitus (59).
19. Alcoholism (acute or chronic) (75).
20. Other general diseases and chronic poisonings (56, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 76, 77).
21. Progressive locomotor ataxia and general paralysis of the insane (80, 83).
22. Cerebral hemorrhage, cerebral embolism and thrombosis (82).
23. Other diseases of the nervous system and of the organs of special sense (78, 79, 81, 84, 85, 86, 87, 88, 89).
24. Diseases of the heart (90, 91, 92, 93, 94, 95).*
25. Other diseases of the circulatory system (96, 97, 98, 99, 100, 101, 102, 103).
26. Bronchitis (106).
27. Pneumonias (107, 108, 109).
28. Other diseases of the respiratory system (tuberculosis excepted) (104, 105, 110, 111, 112, 113, 114).
29. Diarrhea and enteritis (119, 120).
30. Appendicitis (121).
31. Diseases of the liver and biliary passages (124, 125, 126, 127).
32. Other diseases of the digestive system (115, 116, 117, 118, 122, 123, 128, 129).
33. Nephritis (130, 131, 132).
34. Other diseases of the genitourinary system (133, 134, 135, 136, 137, 138, 139).
35. Puerperal septicemia (140, 145).*
36. Other diseases of pregnancy, childbirth and the puerperal state (141, 142, 143, 144, 146, 147, 148, 149, 150).*
37. Diseases of the skin and cellular tissue, and of the bones and organs of locomotion (151, 152, 153, 154, 155, 156).
38. Congenital debility and malformations, premature birth and other diseases of early infancy (157, 158, 159, 160, 161).
39. Senility (162).
40. Suicide (163, 164, 165, 166, 167, 168, 169, 170, 171).*
41. Homicide (172, 173, 174, 175).
42. Violent and accidental deaths (suicide and homicide excepted) (176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 191, 192, 193, 194, 195, 196, 197, 198).
43. Cause of death not specified or ill-defined (199, 200).
